

Headset

Last Modified on 01/26/2018 11:16 am EST

Connect your headset to the headset port on the bottom of your iPECS phone. In Headset mode, pressing the Speaker button sends audio to the headset instead of the speakerphone.

- To make a call, press the main button on your headset, or press the Headset button or Speaker button on the phone
- To answer a call, press the main button on your headset, or press the Headset button or Speaker button on the phone

If your headset is not plugged in when you try to answer a call, you won't be able to hear the call because the audio is going to the headset port, but the call is still active. To recover the call, press the Speaker button, or pick up the handset and press the Headset button again.

- To end a call, press the main button on your headset, or press the Headset button or Speaker button on the phone
