

# Password Lockout for Unsuccessful iPECS ONE Log In Attempts

Last Modified on 12/24/2025 2:11 pm EST

## Feature first available:

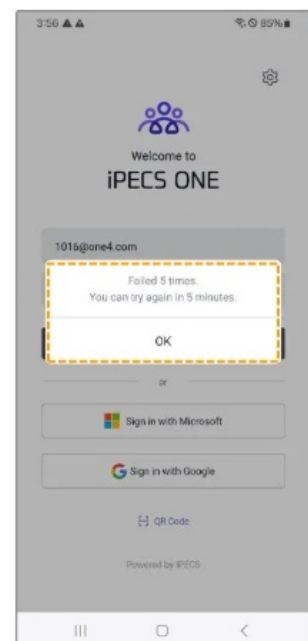

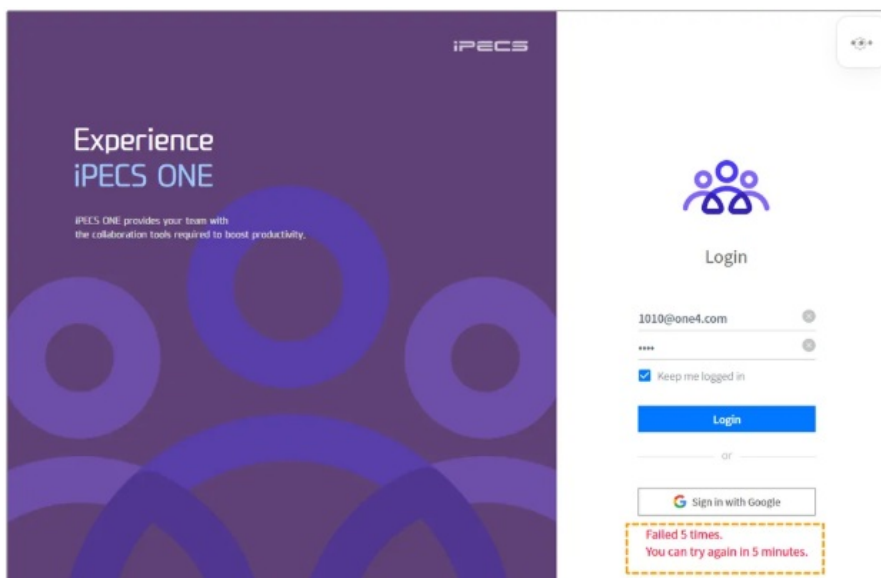

iPECS Cloud version 8.0.

## License Required:

iPECS Cloud Premium or Premium Plus licensing is required to use this feature.

## Description: Password Lockout

- Password is locked out after multiple failed login attempts is a security feature designed to prevent password guessing attacks.
- When a user attempts to log in with the wrong password a certain number of times, the account is temporarily locked, preventing further attempts until a set time passes.
- Password lockout specifications - this applies to both iPECS Cloud account and SSO login.
  - The number of failed attempts will appear on the login screen for each login attempt up to 5 times.
    - Successful login during these 5 attempts will reset the failure count.
    - Waiting 5 minutes after any unsuccessful login attempt will reset the failure count.
  - After 5 unsuccessful attempts, a 5-minute lockout timer is activated.
    - ALL subsequent login attempts during the lockout period are both blocked and resets the 5-minute lockout period.

## Programming:

No programming is required
