

# ACD Callback CLI Change

Last Modified on 12/26/2025 4:45 pm EST

## Feature first available:

iPECS Cloud version 8.0.

## License Required:

ACD Group users (agents)

## Description: ACD Callback CLI sent on return call can be modified

**NOTE:** CLI is Calling Line Identity/Identification. For all intents and purposes, this is Caller-ID as shown to the called party.

- In previous versions, when an agent made an ACD callback call, the customer would see the agent's caller ID. Since this number may differ from the DDI number the customer originally dialed, the customer might not recognize the call as a callback.
- When ACD Call Back is established by the ACD agent, Call Back CLI can be chosen.
  - Agent CLI : CLI set on the agent that executes the call back
  - DDI Number : The number dialed by the caller who made the ACD call.

## Programming:

Call Manager> Call Center> ACD Group> Queuing tab

ACD Group	Callback
ACD Secondary Group	Callback Usage Use
Agent ID	Callback while preserving queued call order Use
ACD Not Ready Reason	Callback Registration Delay sec (60 ~ 3600)
ACD Multi Client	Callback Retry Count 5 0 ~ 20
Conference Room	Callback Retry Interval 600 sec (60 ~ 3600)
Shared Line	Callback Success Connection Time 0 sec (0 ~ 20)
Hot Desk	Callback Retention Time 480 min (60 ~ 6000)
Switch Board	Callback CLI Agent CLI
Quick Code on Busy	
DDI Summary	

## Description

- When ACD Call Back is established by the ACD agent, Call Back CLI can be chosen. User can choose Agent CLI or DDI number.
- Agent CLI means CLI set on the agent that executes the call back.
- DDI Number means the number dialed by the caller who made the ACD call.
